Blockchain Summit

22 August 2018, New York

Background

Blockchain technology today forms the basis of on-line secure ledger/settlement system. Blockchain is gaining momentum since it has multifaceted applications and is moving towards mainstream adoption. The global Blockchain technology market is predicted to rise from \$210m in 2016 to \$2.31bn by 2021. In this event, tutorial followed by multi-speaker summit, leading venture capitalists and angel investors will examine the emerging Blockchain technology and its contributions to on-line secure settlement system in multiple industry sectors.

Blockchain has many applications – in supply chains, healthcare, global monetary systems, financial technologies, energy trading, music, electronic record authentication, delivery of Government services and many more. As a result the Blockchain technology is expected to have significant impact on various industries and so it is critical for stakeholders to formulate careful legal and business strategies around this new business models as the technology and infrastructure, as well as the corresponding market appetite and regulatory structures, evolve rapidly in disparate global markets.

This Summit brings together Blockchain technologists in the finance sector, regulators, industry commentators, computer science researchers and others involved in innovation; these experts explore some of the technology and the many applications of Blockchain.

Call for Participation

We are looking for speakers willing to share their experiences and stories about their work in the field of Blockchain. If you wish to submit a proposal to present at this event please fill in the [speaker's response form](#)

There's no "right" answer here, but some topics that we're always looking for include:

- ✓ Introduction to Blockchain technology;
- ✓ Blockchain technologies: sensors and mobile technology;
- ✓ Blockchain network scaling, performance, and distribution;
- ✓ Hyperledger as Enterprise blockchain platform technology;
- ✓ Smart contract program-language notation and verification;
- ✓ The use of blockchain technologies for compliance and compliance monitoring;
- ✓ Ethereum blockchain and how smart contracts can disrupt transactions in the future;
- ✓ Industry consortiums' impact on financial services;
